

Navigating Digital Threats: Proactive Measures Against Cyber Frauds and Scams

**TGS-2024043420 | ACC-ICT-3002-1.1 Cyber Security
Version v9.0**

Digital Attendance

Purpose

Scan the SSG attendance QR code shown by the trainer for the AM, PM and assessment sessions.

Evidence

Trainer verifies the stated requirement before delivery.

Acceptance

Scan the SSG attendance QR code shown by the trainer for the AM, PM and assessment sessions.

Decision rule Scan the SSG attendance QR code shown by the trainer for the AM, PM and assessment sessions.

General Trainer Profile

Purpose

Insert the assigned trainer biography, credentials and contact protocol before delivery.

Evidence

Trainer verifies the stated requirement before delivery.

Acceptance

Insert the assigned trainer biography, credentials and contact protocol before delivery.

Decision rule Insert the assigned trainer biography, credentials and contact protocol before delivery.

About Dr Alfred Ang

Purpose

Courseware lead and trainer profile: AI, cloud, cybersecurity and adult learning practitioner.

Evidence

Trainer verifies the stated requirement before delivery.

Acceptance

Courseware lead and trainer profile: AI, cloud, cybersecurity and adult learning practitioner.

Decision rule Courseware lead and trainer profile: AI, cloud, cybersecurity and adult learning practitioner.

Ground Rules

Purpose

Participate, protect confidential data, use simulated evidence only, and challenge claims with observable facts.

Evidence

Trainer verifies the stated requirement before delivery.

Acceptance

Participate, protect confidential data, use simulated evidence only, and challenge claims with observable facts.

Decision rule

Participate, protect confidential data, use simulated evidence only, and challenge claims with observable facts.

Course Schedule

Purpose

One day, eight instructional hours, followed by a one-hour Written Assessment and Case Study.

Evidence

Trainer verifies the stated requirement before delivery.

Acceptance

One day, eight instructional hours, followed by a one-hour Written Assessment and Case Study.

Decision rule One day, eight instructional hours, followed by a one-hour Written Assessment and Case Study.

Skills Framework

Purpose

ACC-ICT-3002-1.1 Cyber Security | A1 identify risks; A2 protect information; A3 interpret and escalate threats.

Evidence

Trainer verifies the stated requirement before delivery.

Acceptance

ACC-ICT-3002-1.1 Cyber Security | A1 identify risks; A2 protect information; A3 interpret and escalate threats.

Decision rule

ACC-ICT-3002-1.1 Cyber Security | A1 identify risks; A2 protect information; A3 interpret and escalate threats.

Learning Outcomes

Purpose

Identify scam risks; protect personal and business information; interpret and escalate incidents.

Evidence

Trainer verifies the stated requirement before delivery.

Acceptance

Identify scam risks; protect personal and business information; interpret and escalate incidents.

Decision rule Identify scam risks; protect personal and business information; interpret and escalate incidents.

Course Material Download

Purpose

Sign in to the LMS, open this course, select Courseware, and download the learner slide PDF, guide and activities.

Evidence

Trainer verifies the stated requirement before delivery.

Acceptance

Sign in to the LMS, open this course, select Courseware, and download the learner slide PDF, guide and activities.

Decision rule

Sign in to the LMS, open this course, select Courseware, and download the learner slide PDF, guide and activities.

Assessment Briefing

Purpose

Open book using approved course materials. Three WA questions K1–K3 and three Case Study questions A1–A3.

Evidence

Trainer verifies the stated requirement before delivery.

Acceptance

Open book using approved course materials. Three WA questions K1–K3 and three Case Study questions A1–A3.

Decision rule

Open book using approved course materials. Three WA questions K1–K3 and three Case Study questions A1–A3.

Software that lets hackers control computers downloaded by some here

Assessment Flow

Only the question papers are learner-facing. Answer keys remain trainer-only.

Funding Criteria

Purpose

Meet the attendance requirement and be assessed competent in all prescribed assessments.

Evidence

Trainer verifies the stated requirement before delivery.

Acceptance

Meet the attendance requirement and be assessed competent in all prescribed assessments.

Decision rule **Meet the attendance requirement and be assessed competent in all prescribed assessments.**

Safety Boundary

Purpose

Never open live suspicious links or submit real personal, banking or authentication data during activities.

Evidence

Trainer verifies the stated requirement before delivery.

Acceptance

Never open live suspicious links or submit real personal, banking or authentication data during activities.

Decision rule

Never open live suspicious links or submit real personal, banking or authentication data during activities.

Topic 1 Identifying Cyber Fraud and Scams

Trace the attack chain, inspect observable evidence and break the attacker-controlled trust path.

Annual scam and cybercrime cases

What the data shows

Case volumes and losses are falling, yet the remaining exposure is still material. Use the trend to target controls; do not treat improvement as proof that a contact is safe.

Scam losses remain material

What the data shows

Case volumes and losses are falling, yet the remaining exposure is still material. Use the trend to target controls; do not treat improvement as proof that a contact is safe.

First-half scam cases

What the data shows

Case volumes and losses are falling, yet the remaining exposure is still material. Use the trend to target controls; do not treat improvement as proof that a contact is safe.

2025 victim average loss by age

What the data shows

Case volumes and losses are falling, yet the remaining exposure is still material. Use the trend to target controls; do not treat improvement as proof that a contact is safe.

2025 high-volume scam types

What the data shows

Case volumes and losses are falling, yet the remaining exposure is still material. Use the trend to target controls; do not treat improvement as proof that a contact is safe.

Phishing attack chain

Entry mechanism

Spoofed email or site

Asset and loss path

credential or card capture

Observable evidence

sender-domain mismatch; login link; authentication-code request

Decision rule sender-domain mismatch; login link; authentication-code request

Phishing signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Phishing case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Smishing attack chain

Entry mechanism

Malicious SMS or chat

Asset and loss path

mobile-first credential capture

Observable evidence

unknown sender; shortened link; delivery or refund pretext

Decision rule unknown sender; shortened link; delivery or refund pretext

Smishing signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Smishing case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Vishing attack chain

Decision rule caller-ID trust; authority claim; secrecy; stay-on-line pressure

Vishing signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Vishing case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Government impersonation attack chain

Entry mechanism

False official investigation

Asset and loss path

transfer to a safe account

Observable evidence

threat of arrest; transfer demand; remote interview

Decision rule threat of arrest; transfer demand; remote interview

Government impersonation signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Government impersonation case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Bank impersonation attack chain

Entry mechanism

False fraud alert

Asset and loss path

OTP or digital-token takeover

Observable evidence

urgent reversal; app install; authentication request

Decision rule urgent reversal; app install; authentication request

Bank impersonation signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Bank impersonation case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Investment scam attack chain

Decision rule **guaranteed return; social proof; withdrawal fee**

Investment scam signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Investment scam case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Job scam attack chain

Decision rule **easy income; group chat; pay to unlock commission**

Job scam signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Job scam case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

E-commerce scam attack chain

Entry mechanism

Non-existent or misrepresented goods

Asset and loss path

irreversible prepayment

Observable evidence

off-platform chat; deposit; price anomaly

Decision rule off-platform chat; deposit; price anomaly

E-commerce scam signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

E-commerce scam case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Tech-support scam attack chain

Entry mechanism

False device infection

Asset and loss path

remote access and payment

Observable evidence

unsolicited alert; remote tool;
refund or clean-up fee

Decision rule **unsolicited alert; remote tool; refund or clean-up fee**

Tech-support scam signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Tech-support scam case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Business email compromise attack chain

Entry mechanism

Compromised or spoofed mailbox

Asset and loss path

fraudulent supplier payment

Observable evidence

changed beneficiary; urgency; process bypass

Decision rule **changed beneficiary; urgency; process bypass**

Business email compromise signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Business email compromise case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Romance scam attack chain

Decision rule rapid intimacy; crisis; avoidance of live verification

Romance scam signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Romance scam case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Malware-enabled scam attack chain

Decision rule **unknown-source app; accessibility permissions; overlay**

Malware-enabled scam signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Malware-enabled scam case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

QR phishing attack chain

Entry mechanism

Malicious QR destination

Asset and loss path

hidden redirect to fake service

Observable evidence

unverifiable code;
payment/login request; domain mismatch

Decision rule unverifiable code; payment/login request; domain mismatch

QR phishing signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

QR phishing case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Account takeover attack chain

Decision rule new device; recovery change; unusual messages

Account takeover signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Account takeover case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Money-mule recruitment attack chain

Decision rule keep commission; receive and forward; secrecy

Money-mule recruitment signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Money-mule recruitment case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Pause, Think, and Act

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Lottery and prize scam attack chain

Entry mechanism

False reward notification

Asset and loss path

fee and identity extraction

Observable evidence

unexpected win; tax or delivery fee; urgency

Decision rule unexpected win; tax or delivery fee; urgency

Lottery and prize scam signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Lottery and prize scam case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

SMS from government? Check that it's gov.sg

From 1 July 2024, gov.sg is the Sender ID the government uses to send SMSes.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Loan scam attack chain

Entry mechanism

False low-cost credit offer

Asset and loss path

advance fee and identity theft

Observable evidence

guaranteed approval;
processing fee; unofficial
channel

Decision rule **guaranteed approval; processing fee; unofficial channel**

Loan scam signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Loan scam case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Deepfake impersonation attack chain

Decision rule unusual request; channel shift; no independent callback

Deepfake impersonation signal model

Channel

Identify how the approach arrived and whether the account or number is independently known.

Pressure and action

Separate emotional pressure from the concrete request for data, access or money.

Decision rule

Move to a trusted channel before any disclosure, installation, authentication or payment.

Decision rule Move to a trusted channel before any disclosure, installation, authentication or payment.

Deepfake impersonation case decision

Claim

State only what the sender claims; do not treat identity cues as verified.

Evidence

Record domain, number, URL, payment route, authentication request and timing.

Disposition

Block and report when independent verification fails or high-risk actions are requested.

Decision rule Block and report when independent verification fails or high-risk actions are requested.

Topic 2 Assessing and Protecting Information

Layer identity, device, account and payment controls around the routes scammers exploit.

Independent verification

Configuration intent

Move to contact data obtained outside the suspicious message

Attack path interrupted

Breaks the scammer-controlled trust path

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Independent verification control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

go.gov.sg/scamshield-bot

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Passkeys and phishing-resistant MFA

Configuration intent

Bind authentication to the legitimate origin and device

Attack path interrupted

Reduces credential replay and OTP interception

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Passkeys and phishing-resistant MFA control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Password manager

Configuration intent

Generate unique credentials and match saved origins

Attack path interrupted

Prevents password reuse and exposes look-alike domains

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Password manager control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Device patching

Configuration intent

Apply supported operating-system and browser fixes

Attack path interrupted

Removes known exploit paths used by malicious sites and apps

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Device patching control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Mental well-being		Financial Assistance		
Samaritans of Singapore (24-hour hotline)	1 767	Ministry of Social and Family Development, Social Service Office, ComCare hotline For individuals who have difficulties meeting basic needs and require financial assistance	1800 222 0000

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Unknown-source restriction

Configuration intent

Block sideloading and risky accessibility permissions

Attack path interrupted

Interrupts malware-enabled scam installation

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Unknown-source restriction control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Session review

Configuration intent

Inspect devices, sessions, forwarding and recovery changes

Attack path interrupted

Detects persistence after credential compromise

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Session review control test

Scenario trigger	Expected evidence	Failure response
Apply the control to a simulated urgent request, unusual login or changed payment instruction.	The workflow blocks, challenges, limits or rapidly detects the action.	Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

The Police would like to advise members of the public to refrain from using "WhatsApp Web" and to adopt the following precautionary measures:

- a. Do not use "WhatsApp Web". If there is a need to, always ensure that you are using the official WhatsApp Desktop App or visiting the official website from WhatsApp for "WhatsApp Web". The official URL address is <https://web.whatsapp.com> ;
- b. Never share your WhatsApp account verification codes, personal information, banking details and OTPs with anyone;
- c. Beware of unusual requests received over WhatsApp, even if they were sent by your WhatsApp contacts;
- d. Protect your WhatsApp account by enabling the 'Two-Step Verification' feature. This can be done by opening WhatsApp and go to 'Settings' > 'Account' > 'Two-step verification' > 'Enable';
- e. Check your linked devices regularly. Go to WhatsApp Settings > Linked Devices to review all devices linked to your account. To remove a linked device, tap the device > Log Out. For instructions on how to activate additional security features on WhatsApp, visit <https://www.whatsapp.com/security> ; and
- f. Set a device code and be aware of who has physical access to your phone. Someone who has physical access to your phone might use your WhatsApp account without your permission.

If you have any information relating to such crimes or if you are in doubt, please call the Police Hotline at 1800-255-0000, or submit it online at www.police.gov.sg/ciwitness . All information will be kept strictly confidential. If you require urgent Police assistance, please dial '999'.

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Transaction alerts

Configuration intent

Notify immediately on transfers, payees and card activity

Attack path interrupted

Shortens detection and bank-contact time

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Transaction alerts control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Secure your money easily with Money Lock

- STEP 1
Log in to SC Mobile
- STEP 2
Select the current / savings account
- STEP 3
Select Money Lock option
- STEP 4
Indicate the amount you wish to lock and submit request
- STEP 5
You will receive a confirmation notification once your funds are successfully locked

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Transfer limits

Configuration intent

Cap routine exposure and require deliberate changes

Attack path interrupted

Reduces maximum loss from one compromised session

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule **Capture the enabled state, owner, timestamp and residual risk without exposing secrets.**

Transfer limits control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Money Lock

Configuration intent

Separate protected funds from digitally transferable balances

Attack path interrupted

Limits funds reachable through online compromise

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Money Lock control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Maker-checker approval

Configuration intent

Separate request, verification and payment release

Attack path interrupted

Stops a single compromised mailbox from authorising payment

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Maker-checker approval control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Beneficiary callback

Configuration intent

Verify account changes through a known channel

Attack path interrupted

Targets business email compromise and invoice diversion

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Beneficiary callback control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

ScamShield

Configuration intent

Check and report suspicious numbers, messages and links

Attack path interrupted

Adds community and SPF-informed detection signals

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule **Capture the enabled state, owner, timestamp and residual risk without exposing secrets.**

ScamShield control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Privacy minimisation

Configuration intent

Limit public identity, role and relationship data

Attack path interrupted

Reduces material available for tailored pretexts

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule **Capture the enabled state, owner, timestamp and residual risk without exposing secrets.**

Privacy minimisation control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Offline backup

Configuration intent

Keep tested, disconnected recovery copies

Attack path interrupted

Reduces ransomware leverage and preserves business continuity

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule **Capture the enabled state, owner, timestamp and residual risk without exposing secrets.**

Offline backup control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Incident rehearsal

Configuration intent

Practice evidence, bank, police and internal escalation

Attack path interrupted

Reduces delay and omissions under pressure

Verification evidence

Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Decision rule Capture the enabled state, owner, timestamp and residual risk without exposing secrets.

Incident rehearsal control test

Scenario trigger

Apply the control to a simulated urgent request, unusual login or changed payment instruction.

Expected evidence

The workflow blocks, challenges, limits or rapidly detects the action.

Failure response

Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Decision rule Escalate when the control is absent, bypassed, misconfigured or produces ambiguous evidence.

Activity 1 bridge: Scam Signal Triage

Objective

Classify a suspicious contact using channel, claim, pressure, requested action and payment route.

Evidence

Completed signal matrix with risk score and decision rationale.

Acceptance

Every decision cites at least two observable indicators; no decision relies only on spelling or grammar.

Decision rule

Every decision cites at least two observable indicators; no decision relies only on spelling or grammar.

Activity 2 bridge: Phishing URL and Header Analysis

Objective

Inspect a simulated phishing message without opening its link or attachment.

Evidence

Annotated header and URL decomposition with disposition.

Acceptance

The registrable domain and authentication result are stated correctly and no live suspect link is opened.

Decision rule

The registrable domain and authentication result are stated correctly and no live suspect link is opened.

Activity 3 bridge: Independent Verification Drill

Objective

Break the scammer-controlled channel and verify a claim through trusted contact data.

Evidence

Verification log and trust-boundary explanation.

Acceptance

No sender-provided telephone number, link or QR code is used for verification.

Decision rule No sender-provided telephone number, link or QR code is used for verification.

Activity 4 bridge: Account and Device Hardening

Objective

Apply layered safeguards that reduce credential, session and malware-enabled fraud.

Evidence

Hardening checklist with redacted screenshots and residual risks.

Acceptance

Credentials and recovery codes are absent; each control names the attack path it interrupts.

Decision rule Credentials and recovery codes are absent; each control names the attack path it interrupts.

Activity 5 bridge: ScamShield Check and Report

Objective

Use ScamShield resources to check and report a simulated suspicious message safely.

Evidence

ScamShield check record, redacted report example and limitations note.

Acceptance

Only simulated data is submitted; the learner distinguishes a tool result from proof of legitimacy.

Decision rule Only simulated data is submitted; the learner distinguishes a tool result from proof of legitimacy.

Activity 6 bridge: Financial Control Plan

Objective

Design preventive and detective controls for a personal or small-business payment workflow.

Evidence

Payment control map, approval matrix and scenario test result.

Acceptance

The design separates request, verification and approval, and names at least one preventive and one detective control.

Decision rule

The design separates request, verification and approval, and names at least one preventive and one detective control.

Topic 3 Responding to Cyber Security Threats

Contain loss, preserve evidence and route verified facts to the parties who can act.

Stop interaction

Required action

End calls and messages; do not follow new instructions

Operational reason

prevents further coercion and data disclosure

Evidence to retain

Record time, owner, reference number, source item and observable outcome.

Decision rule Record time, owner, reference number, source item and observable outcome.

Stop interaction escalation check

Severity

Assess financial loss, account or device compromise, personal data, affected people and business impact.

Routing

Notify the bank, platform, ScamShield, Police and internal teams according to the facts and impact.

Handoff test

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Decision rule

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Protect money

Required action

Contact the bank through an official channel and request urgent action

Operational reason

maximises the chance of stopping or tracing transfers

Evidence to retain

Record time, owner, reference number, source item and observable outcome.

Decision rule Record time, owner, reference number, source item and observable outcome.

Protect money escalation check

Severity

Assess financial loss, account or device compromise, personal data, affected people and business impact.

Routing

Notify the bank, platform, ScamShield, Police and internal teams according to the facts and impact.

Handoff test

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Decision rule

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Isolate compromise

Required action

Disconnect a suspected infected device while preserving state

Operational reason

limits attacker access without erasing evidence

Evidence to retain

Record time, owner, reference number, source item and observable outcome.

Decision rule Record time, owner, reference number, source item and observable outcome.

Isolate compromise escalation check

Severity

Assess financial loss, account or device compromise, personal data, affected people and business impact.

Routing

Notify the bank, platform, ScamShield, Police and internal teams according to the facts and impact.

Handoff test

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Decision rule

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Preserve evidence

Required action

Save originals, screenshots, headers, numbers, URLs and transaction references

Operational reason

supports bank, platform and police action

Evidence to retain

Record time, owner, reference number, source item and observable outcome.

Decision rule Record time, owner, reference number, source item and observable outcome.

Preserve evidence escalation check

Severity

Assess financial loss, account or device compromise, personal data, affected people and business impact.

Routing

Notify the bank, platform, ScamShield, Police and internal teams according to the facts and impact.

Handoff test

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Decision rule

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Secure accounts

Required action

Change exposed credentials from a trusted device and revoke sessions

Operational reason

closes reused credentials and stolen sessions

Evidence to retain

Record time, owner, reference number, source item and observable outcome.

Decision rule Record time, owner, reference number, source item and observable outcome.

Secure accounts escalation check

Severity

Assess financial loss, account or device compromise, personal data, affected people and business impact.

Routing

Notify the bank, platform, ScamShield, Police and internal teams according to the facts and impact.

Handoff test

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Decision rule

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Assess scope

Required action

Identify people, accounts, devices, data and payments affected

Operational reason

sets severity and notification priorities

Evidence to retain

Record time, owner, reference number, source item and observable outcome.

Decision rule Record time, owner, reference number, source item and observable outcome.

Assess scope escalation check

Severity

Assess financial loss, account or device compromise, personal data, affected people and business impact.

Routing

Notify the bank, platform, ScamShield, Police and internal teams according to the facts and impact.

Handoff test

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Decision rule

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Report platform abuse

Required action

Use the platform reporting path for the account, advert, message or listing

Operational reason

enables removal and ecosystem disruption

Evidence to retain

Record time, owner, reference number, source item and observable outcome.

Decision rule Record time, owner, reference number, source item and observable outcome.

Report platform abuse escalation check

Severity

Assess financial loss, account or device compromise, personal data, affected people and business impact.

Routing

Notify the bank, platform, ScamShield, Police and internal teams according to the facts and impact.

Handoff test

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Decision rule

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Use ScamShield

Required action

Check or report suspicious contact through official ScamShield resources

Operational reason

contributes signals and receives current advice

Evidence to retain

Record time, owner, reference number, source item and observable outcome.

Decision rule Record time, owner, reference number, source item and observable outcome.

Use ScamShield escalation check

Severity

Assess financial loss, account or device compromise, personal data, affected people and business impact.

Routing

Notify the bank, platform, ScamShield, Police and internal teams according to the facts and impact.

Handoff test

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Decision rule

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Make a Police report

Required action

Provide a factual chronology and supporting evidence

Operational reason

creates an official record and supports investigation

Evidence to retain

Record time, owner, reference number, source item and observable outcome.

Decision rule **Record time, owner, reference number, source item and observable outcome.**

Make a Police report escalation check

Severity

Assess financial loss, account or device compromise, personal data, affected people and business impact.

Routing

Notify the bank, platform, ScamShield, Police and internal teams according to the facts and impact.

Handoff test

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Decision rule

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Notify the workplace

Required action

Engage security, finance, legal and data-protection roles as applicable

Operational reason

coordinates containment and statutory decisions

Evidence to retain

Record time, owner, reference number, source item and observable outcome.

Decision rule **Record time, owner, reference number, source item and observable outcome.**

Notify the workplace escalation check

Severity

Assess financial loss, account or device compromise, personal data, affected people and business impact.

Routing

Notify the bank, platform, ScamShield, Police and internal teams according to the facts and impact.

Handoff test

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Decision rule

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Track recovery

Required action

Maintain actions, owners, reference numbers and outcomes

Operational reason

prevents gaps and supports handoffs

Evidence to retain

Record time, owner, reference number, source item and observable outcome.

Decision rule **Record time, owner, reference number, source item and observable outcome.**

Track recovery escalation check

Severity

Assess financial loss, account or device compromise, personal data, affected people and business impact.

Routing

Notify the bank, platform, ScamShield, Police and internal teams according to the facts and impact.

Handoff test

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Decision rule

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Review controls

Required action

Convert the incident into owned corrective actions

Operational reason

reduces recurrence and tests whether controls work

Evidence to retain

Record time, owner, reference number, source item and observable outcome.

Decision rule Record time, owner, reference number, source item and observable outcome.

Review controls escalation check

Severity

Assess financial loss, account or device compromise, personal data, affected people and business impact.

Routing

Notify the bank, platform, ScamShield, Police and internal teams according to the facts and impact.

Handoff test

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Decision rule

The recipient can act because the brief contains chronology, evidence IDs, confirmed facts and a clear request.

Activity 7 bridge: Incident Evidence Pack

Objective

Preserve useful evidence and start containment without destroying the incident timeline.

Evidence

Incident timeline, evidence register and initial containment record.

Acceptance

The chronology is complete, evidence remains unaltered, and containment actions are distinguished from eradication.

Decision rule

The chronology is complete, evidence remains unaltered, and containment actions are distinguished from eradication.

Activity 8 bridge: Escalation Tabletop

Objective

Route a scam incident to the right internal and external parties using severity and evidence.

Evidence

Escalation matrix, incident brief, notification sequence and after-action actions.

Acceptance

The brief separates facts from assumptions and includes timestamps, evidence references, impact and a clear request.

Decision rule

The brief separates facts from assumptions and includes timestamps, evidence references, impact and a clear request.

Assessment and Close

Use the evidence models, controls and escalation decisions practised in the eight activities.

Written Assessment

Purpose

Three open-ended questions mapped to K1–K3.

Evidence

Use the approved course materials and follow the assessor instructions.

Completion

Three open-ended questions mapped to K1–K3.

Decision rule **Three open-ended questions mapped to K1–K3.**

Case Study

Purpose

One coherent scenario with three questions mapped to A1–A3.

Evidence

Use the approved course materials and follow the assessor instructions.

Completion

One coherent scenario with three questions mapped to A1–A3.

Decision rule **One coherent scenario with three questions mapped to A1–A3.**

Assessment Flow

Only the question papers are learner-facing. Answer keys remain trainer-only.

Digital Attendance

Purpose

Complete the mandatory assessment attendance using the trainer-provided SSG QR code.

Evidence

Use the approved course materials and follow the assessor instructions.

Completion

Complete the mandatory assessment attendance using the trainer-provided SSG QR code.

Decision rule Complete the mandatory assessment attendance using the trainer-provided SSG QR code.

TRAQOM and Course Feedback

Purpose

Complete the course feedback and TRAQOM survey in the LMS.

Evidence

Use the approved course materials and follow the assessor instructions.

Completion

Complete the course feedback and TRAQOM survey in the LMS.

Decision rule **Complete the course feedback and TRAQOM survey in the LMS.**

Thank You

Purpose

Stay calm, break the attacker-controlled channel, verify independently and preserve evidence.

Evidence

Use the approved course materials and follow the assessor instructions.

Completion

Stay calm, break the attacker-controlled channel, verify independently and preserve evidence.

Decision rule Stay calm, break the attacker-controlled channel, verify independently and preserve evidence.
